

North Carolina Manufacturers of Recycled Products

*The North Carolina Division of Pollution
Prevention and Environmental Assistance
presents a selection of recycled products
made by North Carolina companies.*

PUBLISHED BY THE NORTH CAROLINA DIVISION OF POLLUTION PREVENTION AND ENVIRONMENTAL ASSISTANCE:

The North Carolina Division of Pollution Prevention and Environmental Assistance (DPPEA) provides free, non-regulatory technical assistance and training on methods to eliminate, reduce, or recycle wastes before they become pollutants or require disposal. DPPEA addresses solid and hazardous waste and air and water pollution for government agencies, industries, businesses, residences, and institutions.

ACKNOWLEDGMENTS:

The North Carolina Division of Pollution Prevention and Environmental Assistance expresses its appreciation to those who participated in the production of this document.

Gary Hunt, Director

Scott Mouw, Chief, Community and Business Assistance Section

INTRODUCTION

The companies listed in this directory are helping to solve North Carolina's solid waste problem. They are also a vital part of North Carolina's economy, responsible for creating thousands of jobs, millions of dollars of capital investment, and making considerable additions to the state tax base. They help to "close the recycling loop" by manufacturing new products from recyclable materials. These companies play a vital role in maintaining the integrity and stability of recycling and generating economic opportunity by providing valuable markets for the materials collected in residential and workplace recycling programs.

This directory is designed to help consumers and buyers in both the public and private sectors identify recycled products available from North Carolina manufacturers. Government agency purchasers should refer to the Division of Purchase and Contract, N.C. Department of Administration's Web page, located at www.doa.state.nc.us/PandC, for recycled products available through North Carolina state term contracts.

To have a product added or removed from this directory, contact the N.C. Division of Pollution (DPPEA) at (919) 715-6500, or complete the form on pages 43-44. For additional information about buying recycled products turn to the Buy Recycled Resources section (pages 40-42) of this directory or visit the DPPEA Web site at www.p2pays.org/br.

HOW TO USE THIS DIRECTORY

The products in this directory are divided into nine main categories: 1) Agricultural/Animal Products, 2) Building/Construction Products, 3) Miscellaneous Products, 4) Organic Products, 5) Office Products, 6) Pallets, 7) Paper Products, 8) Textile Products, and 9) Transportation Products. In each category, products are listed with two different percentages, "%RC" and "%PCC." The percentage of recycled content (%RC) is the overall proportion of recycled material used to manufacture the product, which may include post-industrial discards. The percentage of post-consumer content (%PCC) is the proportion of recycled material used to manufacture the product which has already served its intended purpose and would have otherwise been discarded as solid waste. An "N/R" placed in the %RC column means the company did not record the percentage of recycled content on their questionnaire.

Company names and detailed information can be found for each manufacturer in the company information index (pages 20-39). Distributor information not otherwise included in the product listing section may be obtained by contacting the manufacturer.

Some products such as pallets and printer toner cartridges listed in the directory are remanufactured. When a product is remanufactured, the item is either refilled or repaired with new or used parts.

WHY BUY RECYCLED PRODUCTS?

The familiar recycling symbol of three chasing arrows represents the three steps involved in recycling: 1) collection and processing, 2) manufacturing, and 3) buying recycled products.

All three of the activities must be completed to “close the recycling loop” and make recycling a viable alternative to waste disposal. Buying products with recycled content establishes demand for these products, stimulates recycling markets, and supports community collection programs. Increased demand for recycled products provides incentive for manufacturers to use higher quantities of recycled feedstocks, which in turn reduces the production costs for recycled-content items.

There are five basic reasons why buying products with recycled material benefits the environment and North Carolina communities:

1. CONSERVATION OF RESOURCES AND LANDFILL SPACE:

Recent data characterizing the recycling infrastructure in North Carolina support the need to increase the procurement of recycled products by businesses, industry, government, and the general public. Using more recycled material in manufacturing increases recovery of recyclables, and reduces dependency on landfills and incinerators, in turn helping North Carolina to reach its waste reduction goals.

2. REDUCTION OF WASTE AND POLLUTION:

Collecting, processing, transporting, and manufacturing new products with recycled feedstocks creates less air and water pollution and less solid waste than making the same products from virgin material. Overall, recycled products generate less pollution during the manufacturing process than comparable virgin products.¹

3. JOB CREATION:

The Institute for Local Self-Reliance in Washington, D.C., estimates that nine jobs are created for every 15,000 tons of solid waste recycled into a new product. In North Carolina, recycling has led to a net creation of jobs. For every 100 jobs created by recycling, only 13 jobs were lost in solid waste and virgin material extraction sectors. The industry supports more than 8,800 jobs within the state.²

4. CONSERVES ENERGY:

Energy savings from manufacturing with recycled material can be substantial. Recycling reduces energy consumption by a factor of three when compared to virgin production and eventual disposal of products (even assuming waste-to-energy disposal methods are employed). According to a report published by DPPEA in September 1997, the recycling of bottles and cans by North Carolina local government programs helped save 1.31 billion Btu of energy in fiscal year 1995-1996.³ Conserving energy reduces the nation's dependency on non-renewable energy resources and the pollution generated from the extraction and consumption of these resources.

5. IMPROVED COMPETITIVENESS:

Research suggests that as companies and industries use more recycled material in their products, they become more efficient and competitive in the global marketplace. An analysis conducted by the U.S. Department of Agriculture (USDA) found that "increased paper recycling will extend U.S. fiber resources and contribute to enhanced competitiveness for the U.S. pulp and paper industry." Heightened competitiveness, according to the USDA, could increase export and decrease import of pulp and paper products and "significantly improve the U.S. balance of trade."⁴

TERMS AND ABBREVIATIONS

RECYCLABLE MATERIAL: Material capable of being recycled that otherwise would be processed or disposed of as solid waste.

RECYCLED CONTENT (RC): Recycled material used to manufacture a product. Federal Trade Commission guidelines only allow recycled content claims that include material recovered or otherwise diverted from the solid waste stream, either during the manufacturing process (pre-consumer) or after consumer use (post-consumer).

POST-CONSUMER CONTENT (PCC): Recycled material used to manufacture a product generated by businesses or households, that has served its intended use and has been diverted or recovered from solid waste destined for disposal. Post-consumer material does not include waste generated by the manufacturing process.

PRE-CONSUMER WASTE: (Also known as post-industrial) Wastes typically generated in the production stages of manufacturing, which may include scrap, trimmings, offcuts overruns, and damaged products.

VIRGIN MATERIALS: Any feedstock used in industrial processing or manufacturing that has been produced from a raw material and that has not been previously used.

PLASTIC ABBREVIATIONS:

Plastics are categorized by resin type into seven industry categories. Each category and resin type is designated by a number inside the recycling symbol on the bottom of beverage and food containers, bags, and other plastic products.

<u>#</u>	<u>ABBREVIATION</u>	<u>MATERIAL</u>	<u>EXAMPLE</u>
#1	PETE or PET	Polyethylene Terephthalate	soda bottle
#2	HDPE	High Density Polyethylene	milk jug
#3	PVC	Polyvinyl Chloride	liquid dish soap container
#4	LDPE/ LLDPE	(Linear) Low Density Polyethylene	grocery bag
#5	PP	Polypropylene	deli tubs
#6	PS	Polystyrene	foam cups, clam shell
#7		other mixed resins
